CE-P SERIES ELECTRIC MULTI-COMPONENT IMM WITH WIDE PLATEN & PARALLEL INJECTION UNIT

Three major customer value propositions:

Low carbon

Intelligence

Flexibility

<0.3%

Repeatability of clamping
force <0.3%

<0.05

Platen parallelism (with
load) <0.05mm

±0.03

Repeatability of mold opening/
closing positions ±0.03mm

Clamping Unit

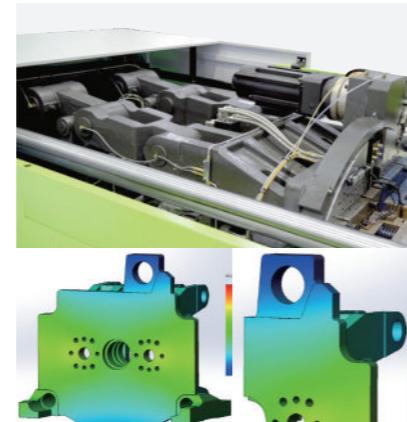

Reliable and stable with fast rotating speed, accurate turntable positioning

Based on European platen design concept, platens are designed with higher rigidity and more accurate force analysis. The BFC (balanced force clamping) technology can adjust the clamping force transmission direction so that the force is applied to the mold more evenly and injection molding is more precision and stable;

Third-generation intelligent control technology on turntable, faster rotating speed, more accurate positioning, more durable and reliable.

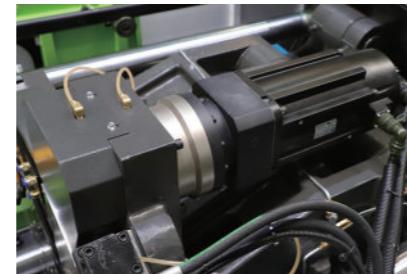

Balanced force clamping technology

The BFC technology delivers high platen rigidity, long mold life. Easily-adjustable processes and minimized possible flashes and better ensures molding accuracy and stability.

Third-generation intelligent digital closed-loop positioning control (DCPC) technology

With the digital closed-loop positioning technology, turntable positioning is faster, more stable and accurate.

Clean and wear-resistant TBF (Tie Bar Free) technology

- ▶ The clamping unit adopts the TBF (Tie Bar Free) technology, wear-resistant tie bars;
- ▶ Clean mold area, no contamination to products.

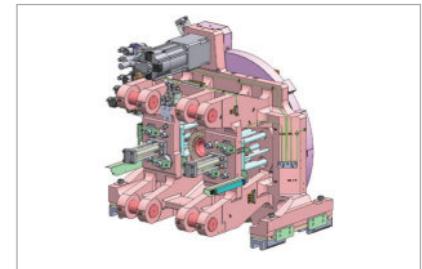

Linear rail design for mold opening / closing

- ▶ The directional accuracy reaches 0.02mm;
- ▶ Fast mold opening/ closing, low energy consumption, no contamination.

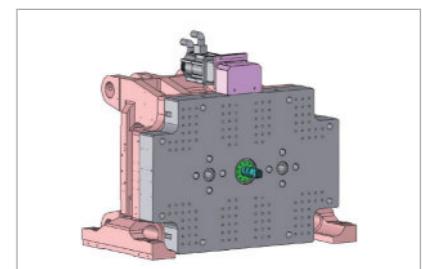

Independent left and right single cylinder ejector design

Even force for mold releasing. Achieve simultaneous ejection with mold opening, in-mold cutting, and other functions. Diversified ejector forward and backward modes. Allow multi-stage ejection. Ejector position accuracy up to 0.2mm, which is conducive to product precision and repeatability. Hydraulic ejection compatible with core pull application.

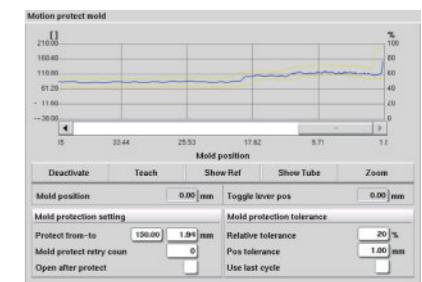

Optional rotary shaft module/ turntable shaft integration module

Based on CE-BTP series, movable platen can be equipped with optional rotary shaft to meet the process requirement for mold core rotation of dual-color products; it can also be equipped with a turntable shaft integration module for compatibility with the requirements of mold rotation and core rotation process.

Intelligent low-pressure mold protection

It can detect very small obstacles and resistance; limit mold damage when there is foreign objects in the cavity or faulty operation occurs.

Injection Unit

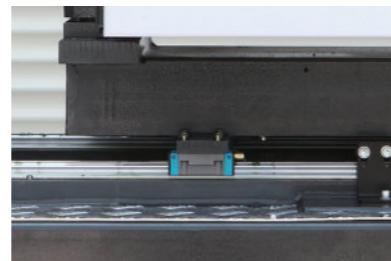

High injection repeatability

The use of the world's leading position sensors with 2 million CPR resolution provides reliable support for ultra-high precision position and speed control; High-precision linear guide support significantly reduces the friction of the plasticizing unit, providing improved pressure stability of plasticizing and injection. Combined with special screws for different materials and precise temperature control, it further improves the stability of injection and allows the product weight repeatability to reach 1‰.

Advanced LGS (Linear Guide Support) technology

Integrated design enhances the overall rigidity of the injection unit; No unnecessary friction. Fast forward and backward.

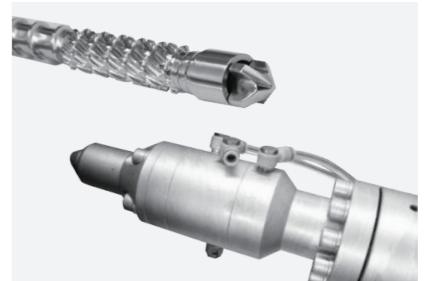

High-mix non-stick plasticizing screw design

By adopting optimized mixing parameters design, high efficiency of plasticizing and better mixing effect can be ensured. Also, problems of sticking, yellowing and blackening can be solved.

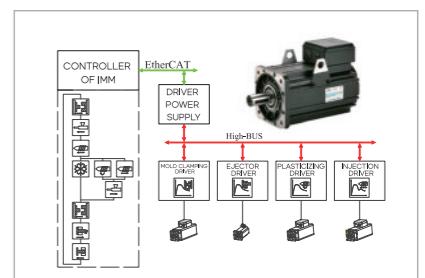

Optional barrel unit for LSR

- ▶ The front end of special silicone mixing screw is equipped with high capacity mixing injection to ensure that materials A and B are fully mixed and eliminate resin build ups, yellowing, and darkening problems.
- ▶ To adapt to the high fluidity of silicone, highly-sensitive sealing is used to minimize leakage during injection start-up and injection process.
- ▶ Add leakage-proof design at the end of screw to prevent silicone leaking from the end of screw, which will cause material waste and unstable injection.
- ▶ Employ a water-cooled pneumatic injection nozzle to prevent leakage of hydraulic silicone and transferring of mold temperature to the injection nozzle, causing curing reaction of mixed hydraulic silicone inside the nozzle.

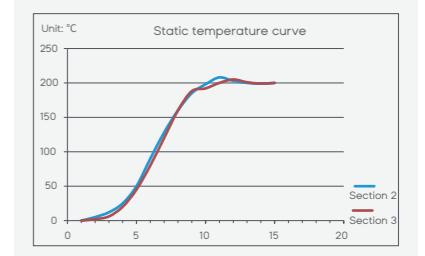

Unique servo direct control (SDC) technology

- ▶ Process algorithm independently developed by YIZUMI for the servo drive;
- ▶ Servo motor controls injection and plasticizing independently, allowing faster feedback, more responsive control, and improved control accuracy;
- ▶ More precise control of speed, position and pressure to meet the requirements of precision equipment.

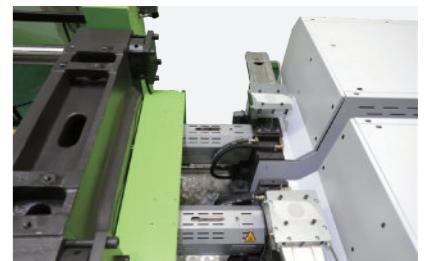

New-generation PID temperature control

With the self-adaptive PID temperature control, the static temperature control accuracy is up to $\pm 0.4^\circ\text{C}$.

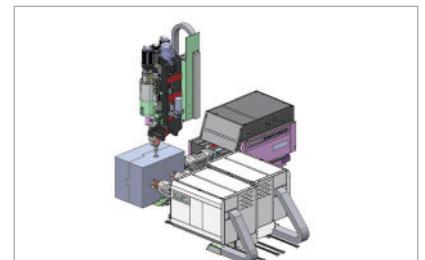

Low-carbon temperature control technology

Scientific low-carbon insulation technology, combined with precise temperature control and shear heating control of materials, offers remarkable energy saving.

Flexible manufacturing technology

Integration of multi-process software and intelligent control technology, combined with a wide range of modular combinations of injection units, provide outstanding manufacturing advantages for different application scenarios, products, and processes.

Control System

Intelligent, integrated, user-friendly HMI

Austrian high-performance controller – with intelligent functions, multi-processes integrated, visual curve, statistical analysis, user-friendly HMI and fast response, provide the best control system solution for CE-P series!

- ▶ Synchronously controlled by double CPUs, it only takes 1ms to scan, ensuring the computing time of every movement of the injection unit is limited to 1ms;
- ▶ The turntable/ rotary shaft positioning is more accurate with the use of synchronous communication technology and servo closed-loop positioning technology;
- ▶ Closed temperature loop control, more accurate control on temperature;
- ▶ Standard 15 inch HD color touchscreen display with clear and neat screen layout;
- ▶ Real-time remote control and operation;
- ▶ USB port for extension of mold parameter storage, easy and convenient operation;
- ▶ Statistical process control (SPC) for multiple injection units;
- ▶ Multi-level of user access management and data protection to ensure data security;
- ▶ Setup and tracking of key movement curves;
- ▶ Expandable I/O modules allow integration of more features, e.g. built-in hot runner control and sequence valve;
- ▶ Flexible software functions, multiple and various injection units to meet flexible needs.

Precision energy consumption analysis

Optional smart meter for machine energy consumption monitoring and analysis. The results can be displayed on computer screen.

Intelligent clamping management system

Optional intelligent clamping force function allows real-time display and optimization of machine's actual clamping force, helping save energy, improve product stability and protect molds. Automatic optimization of process parameters is available.

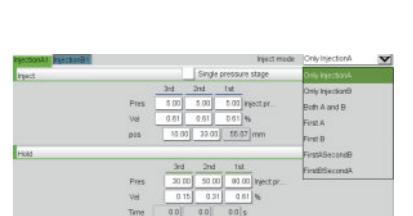

Flexible, interconnected, integrated

Through OPC UA, RS485, or other international standard interfaces to realize seamless connection with robot, mold temperature controller, MES, and other auxiliary machines or management systems, providing an open, compatible, integrated system for IoE.

Integration of multi-process software

Based on the diverse needs of industry applications, continuously updated process software system will provide users with a wider range of more flexible manufacturing options.

L/V Independent Injection Unit

Flexible combination for wider range of applications

Meet the combination needs of injection molding machines of different tonnages and different brands through modular design. Quickly build a dual-component injection molding machine.

Independent V injection unit

Independent V-type injection unit adopts independent modular design to meet the combination needs of injection molding machines of different tonnages. With YIZUMI's optimization design, the removal of the injection unit provides more mold height for convenient installation and disassembly.

Independent L injection unit

Independent L-type injection unit adopts independent modular design to meet the combination needs of injection molding machines of different tonnages and different brands. Flexible injection unit is convenient for using, providing series functions including core pulling, sequential valve, hot runner and synchronous action.

User-friendly design for ease of use

The computer operating platform uses a detachable design that allow customer to determine the operating position flexibly according to user habits.

Adjust the application range of the independent injection unit using the hand wheel to accommodate molds of different sizes.

- ① Independent V injection unit
- ② Independent industrial controller
- ③ Adjustable handwheel of independent injection unit
- ④ Independent L injection unit

Compact design for easy storage

The independent injection unit can be equipped with the optional roller for easy migration and storage of the injection unit.

Optional needle valve control

The independent injection unit can render needle valve control to either the primary injection element or the secondary injection unit to compensate inadequate configuration of the main unit.

Optional hydraulic core-pull function (for hydraulic injection unit)

The core-pull and control effect for mold control driven by the independent injection unit is the same as the control effect provided by a main unit that comes with core-pull.

Optional hot runner

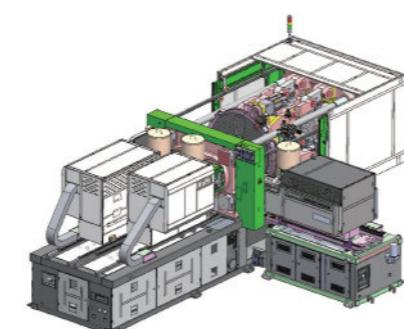

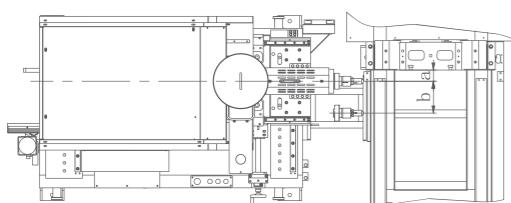

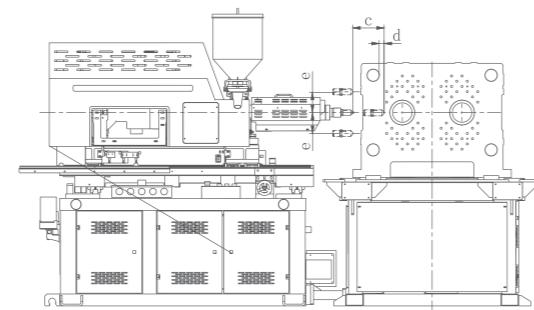

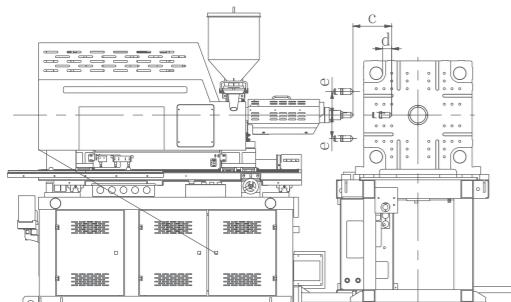

The independent injection unit is equipped with a computer that can help to achieve extended control over 6-32 sets of hot runners to meet the molding needs of multiple hot runners.

Standard and Optional Features

	Standard	Optional
CLAMPING UNIT		
High-rigidity platen with balanced force (BFC technology)	●	
TBF (Tie Bar Free) technology	●	
Electrical servo turntable	●	
MDP (Micro Distance Popup) technology	●	
Turntable water circuit (1 set for 160T, 2 sets for 230-550T, 1 in & 2 out for each set)	●	
Euromap robot mounting hole (on the top of fixed platen)	●	
Mechanical / electrical safety devices	●	
Automated central lubrication system	●	
Low pressure mold protection (Ai highly-sensitive mold protection)	●	
One-button automatic mold height adjustment	●	
Safety edges for machine gates	●	
Linear guide for movable platen	●	
Hydraulic ejector	●	
Synchronous ejection during mold opening function	●	
Multi-stage ejector forward	●	
Ejector motion delay	●	
Ejector motion selection (4 modes)	●	
3-stage ejector control	●	
5-stage mold opening and closing control	●	
Slope control for mold opening and closing (high, medium and low modes)	●	
Confirmation signal of ejector plate reset connected to turntable	●	
Electric safety door		○
10-pin electrical connector for turntable		○
Multiple sets of air blow		○
Multiple hydraulic core-pull on fixed platen (or turntable)		○
Magnetic platen		○
Mold thermal insulation		○
Electrical servo rotary shaft		○
Integrated module of turntable and rotary shaft		○
Increased maximum daylight		○
Smart clamping force management function		○
Electric ejector		○
Various locating rings		○
INJECTION UNIT		
Combination of multiple modular injection units	●	
Energy-saving groove design of barrel (patented design)	●	
Multi-stage PID temperature control	●	
Feed port closed-loop temperature detection	●	
Temperature holding	●	
Temperature optimization	●	
Appointed temperature rise	●	
Compulsory barrel heating protection	●	
Screw cold start prevention	●	
Automatic purging	●	
Calibration of injection pressure zero point	●	
Real-time display of plasticizing speed	●	
Real-time display of plasticizing back pressure	●	
Injection unit shift settings (switch check, shift time)	●	
High-force nozzle contact device (configurable)	●	
Nozzle center alignment adjusting device	●	
Sliding hopper	●	
Screw speed detection	●	
Fully-closed heat retaining cover	●	
Linear guide rail for carriage	●	
5-stage injection control (pressure, speed, position)	●	
3-stage holding pressure control (pressure, speed, position)	●	
3-stage plasticizing control (back pressure, speed, position)	●	
Suck-back control (pre-suckback and post-suckback)	●	
Holding pressure switching (6 modes)	●	
Injection speed response setting (High, medium, low)	●	
Mold opening during plasticizing	●	
Central lubrication system	●	
High-mix non-stick plasticizing screw		○
Three-component and multi-component injection molding		○

	Standard	Optional
Barrel unit for TPE		
Barrel unit for TPU		○
Barrel unit for PC		○
Barrel unit for LSR		○
Special or adjustable mold locating hole center distance		○
Ceramic heater band		○
Infrared heater band		○
Nano thermal insulation function		○
Spring shut-off nozzle		○
Extended nozzle		○
Customized nozzle head		○
CONTROL SYSTEM		
Turntable digital closed-loop positioning control (DCPC technology)	●	
Turntable protection against power outage	●	
Non-return-to-zero turntable	●	
Logic control of multiple injection units	●	
Data upload and download via USB	●	
Rat-proof electric wire	●	
Multi-level software password authentication for data protection	●	
Interlock for turntable and safety door	●	
Protection against over-high oil temperature	●	
Emergency stop function (on both operator side and non-operator side)	●	
Electrical protection of nozzle purge guard	●	
Product quality monitoring	●	
Statistical process control (SPC)	●	
Synchronous injection signal	●	
Multiple language (Chinese and English)	●	
15" TFT true color LED HD touch screen	●	
Production management	●	
Tri-color alarm light	●	
Alarm buzzer	●	
Metric and English unit conversions	●	
I/O check display function	●	
Curves of mold opening/closing and ejector	●	
Injection processing curve monitoring	●	
1 set of standard USB interface on the operation panel	●	
Power outlet (220V×1)	●	
Power outlet (380V, 16A×2+32A×1)	●	
Euromap 12 plug for robot	●	
Intelligent weight control function	●	
Injection compression function	●	
Euromap 67 plug for robot		○
Core pull and ejector setting in controller		○
Integrated hot runner control		○
Mold temperature display and control		○
Electrical interface for gas assisted injection		○
Sequential valve		○
Air-assisted injection device		○
Display of machine energy consumption statistics		○
Central (networking) monitoring system		○
Protective light grid of safety gates		○
Synchronous plasticizing signal		○
Changing power supply voltage		○
21"LED HD display		○
Multiple operating languages		○
OTHERS		
Operation manual	●	
Adjustable leveling pad	●	
A tool kit, spare parts	●	
Mold mounting screw	●	
Stainless steel hopper		○
Mold clamp		○
Auto loader		○
Glass tube flowmeter		○
Dryer		○
